This International Search Report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This International Search Report consists of a total of 3 sheets.

☒ It is also accompanied by a copy of each prior art document cited in this report.

### 1. Basis of the report

a. With regard to the **language**, the international search was carried out on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.

☐ the international search was carried out on the basis of a translation of the international application furnished to this Authority (Rule 23.1(b)).

b. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, the international search was carried out on the basis of the sequence listing :

☐ contained in the international application in written form.

☐ filed together with the international application in computer readable form.

☐ furnished subsequently to this Authority in written form.

☐ furnished subsequently to this Authority in computer readable form.

☐ the statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.

☐ the statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished

2. ☐ **Certain claims were found unsearchable** (See Box I).

3. ☐ **Unity of invention is lacking** (see Box II).

4. With regard to the **title**,

☒ the text is approved as submitted by the applicant.

☐ the text has been established by this Authority to read as follows:

5. With regard to the **abstract**,

☒ the text is approved as submitted by the applicant.

☐ the text has been established, according to Rule 38.2(b), by this Authority as it appears in Box III. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. The figure of the **drawings** to be published with the abstract is Figure No.

☒ as suggested by the applicant.

☐ because the applicant failed to suggest a figure.

☐ because this figure better characterizes the invention.

2a \_\_\_\_\_

☐ None of the figures.

**(54) Title:** VIDEO PROGRAM GUIDE APPARATUS AND METHOD

**(57) Abstract**

A system and a related method for selecting a program for viewing is described. A plurality of programs and associated program information are received from a remote source. A program from said plurality of programs is first selected in response to a user input. Rating information for this selected program is input by a user locally. Another program may then be selected, based on the input rating information and the associated program information.

## VIDEO PROGRAM GUIDE APPARATUS AND METHOD

## FIELD OF THE INVENTION

The subject invention concerns a video program guide  
5 apparatus and method, and in particular, to an apparatus and method  
for allowing a user to rate a selected program.

## BACKGROUND OF THE INVENTION

The act of selecting a television program to watch has  
10 become more complicated in that the number of available channels  
has increased dramatically of late. For example, RCA® DSS® direct  
broadcast satellite receivers provide as many as 150 channels to  
choose from. Heretofore, a user who wanted to see "what's on" could  
merely consult a television schedule printed in his local newspaper in  
15 the hope that he would eventually find a program which sparked his  
interest.

Such a practice may work well when there are only a few  
television channel schedules to examine, however, it is unlikely that a  
viewer would be able to examine the complete schedules for 150  
20 television channels, just to see "what's on" at a given time. Such a  
task would be daunting even if all of the programs were to be listed  
by category. A viewer may find that there are only a few programs  
of interest to him out of the vast number of available programs.  
Consequently, it is felt that as the number of channels increases, the  
25 chances of successfully locating a desirable program in a short time  
becomes more and more unlikely.

An Electronic Program Guide (EPG) may partially alleviate  
the above problem. An EPG is an interactive, on-screen display  
feature that displays information analogous to TV listings found in  
30 local newspapers or other print media. In addition, an EPG also

includes information necessary for collating and decoding programs. An EPG provides information about each program within the time frames covered by the EPG which typically ranges from the next hour up to seven days. The information contained in an EPG includes

5 programming characteristics such as channel number, program title, start time, end time, elapsed time, time remaining, rating (if available), topic, theme, and a brief description of the program's content. EPGs are usually arranged in a two-dimensional table or grid format similar to the printed TV guide, with time information on one

10 axis and channel information on the other axis.

Unlike non-interactive guides that reside on a dedicated channel and merely scroll through the current programming on the other channels for the next 2 to 3 hours, EPGs allow viewers to select any channel at any time during some period into the future, e.g., up to

15 seven days forward. Further EPG features include the ability to highlight individual cells of the grid containing program information. Once highlighted, the viewer can perform functions pertaining to that selected program. For instance, the viewer could instantly switch to that program if it is currently being aired. Viewers could also

20 program one touch video cassette recording (VCR) or the like if the television is properly configured and connected to a recording device. Such EPGs are known in the art and described, for instance, in US Pat. Nos. 5,353,121; 5,479,268; and 5,479,266 issued to Young et al. and assigned to StarSight Telecast, Inc.

25 In addition, US Pat. No. 5,515,106, issued to Chaney et al., and assigned to the same assignee of the present invention, describes in detail an exemplary embodiment including data packet structure necessary to implement an exemplary program guide system. The exemplary data packet structure is designed so that both the channel

30 information (e.g., channel name, call letters, channel number, type,

etc.) and the program information (e.g., title, rating, star, etc.) relating to a program may be transmitted from a program guide database provider to a receiving apparatus efficiently.

Currently, systems are known for monitoring what a user has previously watched, and then suggesting similar programming based on the watching habit of the user. This is disclosed, for example, in allowed U.S. Pat. Application No. 08/573,113, filed 12/15/95, in the names of Wehmeyer, et al., and assigned to the same assignee of the present invention. These known systems, however, do not allow the user to modify the monitoring process in accordance with user preferences. That is, the user cannot indicate whether or not the user liked the program, and therefore, the monitoring/suggesting feature cannot take into account this information when making program suggestions to the user.

15

### SUMMARY OF THE INVENTION

The present inventor recognizes that it is advantageous to get some affirmative feedback about a selected program so that any suggested program may better match a user's tastes or watching habits. Therefore, a system and a related method for selecting a program for viewing is described. A plurality of programs and associated program information are received from a remote source. A program from said plurality of programs is first selected in response to a user input. Rating information for this selected program is inputted by a user locally. Another program may then be selected, based on the input rating information and the associated program information.

25

## BRIEF DESCRIPTION OF THE DRAWING

FIGURE 1 is an illustration of a screen display showing an  
5 EPG.

FIGURE 2A and 2B are illustrations of an exemplary screen display for a user to rate a selected program.

FIGURE 3 is a flowchart useful in understanding the invention.

10 FIGURE 4 is an illustration in block diagram form of an apparatus suitable for use with the invention.

## DETAILED DESCRIPTION OF THE INVENTION

15 Television systems such as the RCA® DSS® direct broadcast satellite system and Starsight® transmit channel guides for display on the television receivers of subscribers. FIGURE 1 shows an Electronic Program Guide screen display 110 which may be produced, for example, by an RCA® DSS® direct broadcast satellite receiver  
20 system, manufactured by Thomson Consumer Electronics, Inc. Indianapolis, IN. A user selects a television program from a Program Guide for viewing, by moving a cursor (via operation of, for example, up, down, right, and left, direction control keys, on a remote control device 450R of FIG. 4) to a cell of the program guide screen display  
25 which contains the name of the desired program. When a SELECT key, for example, of the remote control 450R is pressed, the current x and y position of the cursor is evaluated to derive virtual channel and program time information. In this example of FIGURE 1, a particular television show, CINE SATURDAY NIGHT MOVIE: ZULU in cell 105 has  
30 been highlighted for selection by use of the cursor keys on a remote

control unit (e. g., 450R of FIGURE 4). The highlighting is illustrated by the dark box outlining the title in FIGURE 1. Normally, upon pressing the SELECT key, the relevant programming data is transferred to a programming unit. Note also that an auxiliary text display 120 is shown. Auxiliary text display 120 provides additional program data relating to the highlighted television program. A further use for the data provided by channel guide screen 110 and auxiliary text display 120 will be described below according to aspects of the present invention.

10 In addition, once a program has been highlighted, as shown in FIGURE 1 and described above, a user may also press a RATING key on remote control unit 450R, for example, to provide evaluation input for a particular show he or she has been watching, according to an aspect of the invention. This exemplary RATING key, 15 may also be pressed during program viewing as shown in FIGURE 2A. Once this key is pressed, the user is allowed to input how much the user has enjoyed the program. As shown in FIGURE 2A, an exemplary embodiment is shown in which the phrase "I *LOVED* this program" is first displayed. This may be, for example, the highest rating a user 20 can give to a program. If the user agrees with this rating, then the user may press, for example, the RATING key again to confirm the rating for this program. The user can also enter a different rating for this program by selecting the left arrow 205 or right arrow 206. The rating displayed will be changed, for example, to "I *HATED* this 25 program", as shown in FIGURE 2B.

FIGURE 3 shows an exemplary flow diagram of a subroutine program which may be executed by an exemplary microprocessor 415R (shown in FIGURE 4) for implementing the features of the present invention. The program is entered at step 30 300. The microprocessor then determines whether the "Rating Mode"

has been requested by an user in step 305 for a selected program. Again, as described previously, the "Rating Mode" may be invoked by pressing a key such as RATING on a user entry device, such as remote control unit 450R. Once the user has requested to rate a program, the  
5 microprocessor 415R will facilitate the entry of the user rating. As shown in step 310 and also as discussed above, one exemplary embodiment for obtaining the user rating information is by displaying a first rating such as "I *LOVED* this program" as shown in FIGURE 2A. In steps 315 and 320, the subroutine will also display another rating  
10 for the user to select, if the user request another rating as shown in FIGURE 2B.

Steps 310 - 320 show one embodiment of user entry of rating information. Another exemplary embodiment may include prompting the user to enter a number such as 1 to 5 with 5 as either  
15 the highest or the lowest rating. Another embodiment allows the user to enter a letter such as A, B, C, D. with A as the highest or lowest rating, for example.

Once the rating information is entered by the user, the program allows the user to confirm the rating information in step  
20 323, for example, by pressing a key, such as the RATING key as discussed previously. As shown in step 330, once the user confirms the information, this information is then stored in, for example, memory 421R of FIGURE 4, along with the other programming information associated with the selected program, as shown, for  
25 example, in block 120 of FIGURE 1.

In step 335, the user may then request the system to suggest programs based on the user entered ratings information. The user may request this, for example, by highlighting an icon SUGGEST  
106, as shown in FIGURE 1. Once this has been requested, the system  
30 will suggest programs by comparing the user entered rating

information with the program guide information as shown in step 335.

Various methods may be implemented based on the user entered rating information and the program guide data received remotely. A simple suggestion algorithm may be, for example, to suggest to a viewer all the programs which have the same characteristics as a program which has received the highest user rating, based on the program information from the program guide. In other words, the system may suggest to the viewer all the programs which may have the same actor, producer, and/or theme, for example. Another method may comprise concentrating on one particular aspect of programming information such as THEME. The user ratings may then be used to create a histogram for each THEME type to see if there is any preference trend for that viewer. If a preference trend is detected, then a program having that particular theme is then suggested. Other suggestion methods may include having some weighting factors for each programming characteristic of a rated program. One skilled in the art can readily recognize that many methods may be developed to take advantage of both the user input rating information of programs viewed the received program guide information to suggest new programs to user.

As noted above, the program guide information used by the controller of the subject apparatus according to the aspects of the present invention may be received from a satellite television communication system. FIGURE 4 shows such a satellite television communication system in which, a satellite 400S receives a signal representing audio, video, or data information from an earth-based transmitter 400T. The satellite amplifies and rebroadcasts this signal to a plurality of receivers 400R, located at the residences of consumers, via transponders operating at specified frequencies and

having given bandwidths. Such a system includes an uplink transmitting portion (earth to satellite), an earth-orbiting satellite receiving and transmitting unit, and a downlink portion (satellite to earth) including a receiver located at the user's residence.

5           In a such a satellite system, the information necessary to select a given television program is not fixedly-programmed into each receiver but rather is down-loaded from the satellite continually on each transponder. The television program selection information comprises a set of data known as a Master Program Guide (MPG),  
10   which relates television program titles, their start and end times, a virtual channel number to be displayed to the user, and information allocating virtual channels to transponder frequencies and to a position in the time-multiplexed data stream transmitted by a particular transponder. In such a system, it is not possible to tune  
15   any channel until the first master program guide is received from the satellite, because the receiver (IRD, or Integrated Receiver Decoder) literally does not know where any channel is located, in terms of frequency and position (i.e. data time slot) within the data stream of any transponder.

20           A master program guide is preferably transmitted on all transponders with the television program video and audio data, and is repeated periodically, for example, every 2 seconds. The master program guide, once received, is maintained in a memory unit in the receiver, and updated periodically, for example every 30 minutes.

25   Retention of the master program guide allows instantaneous television program selection because the necessary selection data are always available. If the master program guide were to be discarded after using it to select a television program, then a delay of at least two seconds would be incurred while a new program guide was

acquired, before any further television program selections could be performed.

Once the channel transponder carrying a desired television program is tuned, the data packets containing the audio and video information for that program can be selected from the data stream received from the transponder by examining the data packets for the proper SCID (Service Component Identifier) 12 bit code. If the SCID of the currently received data packet matches the SCID of the desired television program as listed in the program guide, then the data packet is routed to the proper data processing sections of the receiver. If the SCID of a particular packet does not match the SCID of the desired television program as listed in the program guide, then that data packet is discarded.

A brief description of system hardware, suitable for implementing the above-described invention, now follows. In FIGURE 4, a transmitter 400T processes a data signal from a source 401 (e.g., a program signal source) and transmits it to a satellite 400S which receives and rebroadcasts the signal to a receiving antenna 400A which applies the signal to a receiver 400R. Transmitter 400T includes an encoder 410T, a modulator (i.e., modulator/forward error corrector (FEC)) 420T, and an uplink unit 430T. Encoder 410T compresses and encodes signals from source 401 according to a predetermined standard such as MPEG. MPEG is an international standard developed by the Moving Picture Expert Group of the International Standards Organization for coded representation of moving pictures and associated audio stored on digital storage medium. An encoded signal from unit 410T is supplied to modulator/Forward Error Corrector (FEC) 420T, which encodes the signal with error correction data, and Quaternary Phase Shift Key (QPSK) modulates the encoded signal onto a carrier.

10

Uplink unit 430T transmits the compressed and encoded signal to satellite 400S, which broadcasts the signal to a selected geographic reception area. The signal from satellite 400S is received by an antenna dish 400A coupled to an input of a so-called set-top  
5 receiver 400R (i.e., an interface device situated atop a television receiver). Receiver 400R includes a demodulator (demodulator/Forward Error Correction (FEC) decoder) 410R to demodulate the signal and to decode the error correction data, an IR receiver 412 for receiving IR remote control commands, a  
10 microprocessor 415R, which operates interactively with demodulator/FEC unit 410R, and a transport unit 420R to transport the signal to an appropriate decoder 430R within unit 400R depending on the content of the signal, i.e., audio or video information. An NTSC Encoder 440R encodes the decoded signal to a  
15 format suitable for use by signal processing circuits in a standard NTSC consumer VCR 402 and standard NTSC consumer television receiver 403. Microprocessor (or microcontroller, or microcomputer) 415R receives infrared (IR) control signals such as key presses SELECT, RATING as discussed above, from remote control unit 450R,  
20 and sends control information to VCR 402 via an IR link 418R. Microprocessor 415R also generates the on-screen display (OSD) signals needed for presenting the interactive or confirmation EPG display screen shown for example in FIGURES 1, 2A or 2B, to the user. Microprocessor 415R also receives and interprets cursor key X and Y  
25 information in order to control the highlighting and selection of user choices in the on-screen display screens. In addition, Microprocessor 415R executes the program subroutine as represented by flow chart of FIGURE 3 to provide the features according to aspects of the present invention.

Although the invention was described with reference to a satellite television system, it is equally applicable to ground based television broadcast systems, both digital and analog, a settop box receiver, or any other electronic devices capable of receiving and  
5 processing electronic program guide information.

It will be understood that various changes in the details, materials, and arrangements of the parts which have been described and illustrated above in order to explain the nature of this invention may be made by those skilled in the art without departing from the  
10 principle and the scope of the invention as recited in the following claims.

12  
CLAIMS

1. A method for controlling a signal processing system, comprising the steps of:
  - 5 receiving from a remote source a plurality of programs and associated program information;
  - selecting a first program from said plurality of programs in response to a user input;
  - inputting rating information for said first selected program; and
  - 10 selecting a second program in response to said input rating information and said associated program information.
2. The method of claim 1 wherein said rating information indicates user preference for said first selected program.
- 15 3. The method of claim 2 wherein said rating information comprising at least a numeric character.
4. The method of claim 3 wherein said rating information comprising at least an alphabetic character.
- 20 5. The method of claim 1 further comprising the step of storing said rating information in memory.
- 25 6. A method for processing program guide information, comprising the steps of:
  - receiving said program guide information from a remote source;
  - storing said program guide information in memory;
  - obtaining a rating locally for a selected program; and
  - 30 associating said rating with said selected program.

7. The method of claim 6 wherein said rating indicates user preference for said selected program.
- 5 8. The method of claim 7 further comprising the step of:  
storing said rating with said selected program alone with  
portion of said program guide information associated with said  
selected program.
- 10 9. An apparatus for suggesting a program for viewing, comprising:  
means for receiving from a remote source a plurality of  
programs and associated program information;  
means for selecting a first program from said plurality of  
programs in response to a user input;  
15 means for inputting rating information locally for said first  
selected program; and  
means for selecting a second program based on said input rating  
information and said associated program information.
- 20 10. The apparatus of claim 9 wherein said rating information  
indicates user preference for said first selected program.
11. The apparatus of claim 10 wherein said rating information  
comprising at least a numeric character.
- 25 12. The apparatus of claim 11 wherein said rating information  
comprising at least an alpha character.
13. The method of claim 1 wherein the step of inputting said rating  
30 information is performed locally.

☒ Further documents are listed in the continuation of box C.

☒ Patent family members are listed in annex.

\* Special categories of cited documents :

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier document but published on or after the international filing date
- "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

- "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- "3" document member of the same patent family

**PCT**

NOTIFICATION OF TRANSMITTAL OF  
THE INTERNATIONAL PRELIMINARY  
EXAMINATION REPORT  
(PCT Rule 71.1)

Date of mailing  
(day/month/year) 24.03.2000

Applicant's or agent's file reference  
RCA 88859

**IMPORTANT NOTIFICATION**

International application No.  
PCT/US99/00409

International filing date (day/month/year)  
08/01/1999

Priority date (day/month/year)  
08/01/1998

Applicant  
THOMSON CONSUMER ELECTRONICS, INC. et al.

1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

**4. REMINDER**

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

1. This international preliminary examination report has been prepared by this International Preliminary Examining Authority and is transmitted to the applicant according to Article 36.

2. This REPORT consists of a total of 6 sheets, including this cover sheet.

☐ This report is also accompanied by ANNEXES, i.e. sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions under the PCT).

These annexes consist of a total of sheets.

3. This report contains indications relating to the following items:

- I ☒ Basis of the report
- II ☐ Priority
- III ☐ Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- IV ☐ Lack of unity of invention
- V ☒ Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- VI ☐ Certain documents cited
- VII ☒ Certain defects in the international application
- VIII ☒ Certain observations on the international application

|   |  |

**INTERNATIONAL PRELIMINARY  
EXAMINATION REPORT**

International application No. PCT/US99/00409

**I. Basis of the report**

1. This report has been drawn on the basis of (*substitute sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to the report since they do not contain amendments.*):

**Description, pages:**

1-11 as originally filed

**Claims, No.:**

1-13 as originally filed

**Drawings, sheets:**

1/4-4/4 as originally filed

2. The amendments have resulted in the cancellation of:

- ☐ the description, pages:  
☐ the claims, Nos.:  
☐ the drawings, sheets:

3. ☐ This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed (Rule 70.2(c)):

4. Additional observations, if necessary:

**INTERNATIONAL PRELIMINARY  
EXAMINATION REPORT**

International application No. PCT/US99/00409

**V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

**1. Statement**

|                               |      |        |      |
|-------------------------------|------|--------|------|
| Novelty (N)                   | Yes: | Claims |      |
|                               | No:  | Claims | 1-13 |
| Inventive step (IS)           | Yes: | Claims |      |
|                               | No:  | Claims | 1-13 |
| Industrial applicability (IA) | Yes: | Claims | 1-13 |
|                               | No:  | Claims |      |

**2. Citations and explanations**

**see separate sheet**

**VII. Certain defects in the international application**

The following defects in the form or contents of the international application have been noted:

**see separate sheet**

**VIII. Certain observations on the international application**

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

**see separate sheet**

**INTERNATIONAL PRELIMINARY  
EXAMINATION REPORT - SEPARATE SHEET**

---

International application No. PCT/US99/00409

**V. Reasoned statement**

1. Reference is made to the following documents:

D1: US-A-5 410 344 (BARKER ALVA C ET AL) 25 April 1995

D2: US-A-5 223 924 (STRUBBE HUGO J) 29 June 1993

2. Claim 1:

Document D1 discloses a method (see col. 2, lines 23-40) for controlling a signal processing system (20a), comprising the steps of:

receiving from a remote source (12) a plurality of programs and associated program information (see col. 4, lines 6-21);

selecting a first program from said plurality of programs in response to a user input (see col. 5, lines 46-50);

inputting rating information for said first selected program (see col. 6, line 60 - col. 7, line 7); and

selecting a second program in response to said input rating information and said associated program information (see col. 6, lines 5-16).

Besides, a similar prior art is also disclosed in document D2.

Therefore, the subject matter of claim 1 lacks novelty with respect to the disclosure of D1 or D2.

3. Claim 9:

The same objection likewise applies to this corresponding apparatus claim.

4. Claim 6:

Reference is preferably made to document D2 which further discloses a method for processing program guide information, comprising the steps of:

receiving said program guide information from a remote source (see col. 2, line 50 - col. 3, line 8);

storing said program guide information in memory (see col. 4, lines 17-21);

obtaining a rating locally for a selected program (see col. 3, lines 17-21 and col. 4, lines 21-26);

associating said rating with said selected program (see col. 4, line 59 - col. 5, line 11).

Consequently, the subject matter of claim 6 lacks novelty at least with respect to the disclosure of D2.

5. Claims 2-5, 7, 8 and 10-13:

These dependent claims do not appear to comprise any additional features that would render their subject-matter new and inventive over the available prior art.

In particular:

- rating information indicating user preference (claims 2, 7 and 10) is known from D1 (see col. 1, lines 7-10) and D2 (see col. 3, lines 17-21);
- rating information comprising numeric characters (claims 3 and 11) is contemplated in D1 (see Fig. 5);
- storing said rating information in memory (claim 5) is suggested in both D1 (see file 32a) and D2 (see memory 54).

Therefore, these claims fail together with the independent claims for lack of novelty, or at least for lack of inventive step.

**VII. Certain defects**

1. The independent claims are not in the two-part form in accordance with Rule 6.3(b) PCT, which in the present case would be appropriate, with those features known in combination from the prior art (documents D1 and D2) being placed in a preamble (Rule 6.3(b)(i) PCT) and with the remaining features being included in a characterising part (Rule 6.3(b)(ii) PCT).
2. The features of the claims are not provided with reference signs placed in parentheses (Rule 6.2(b) PCT).
3. Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the documents D1 and D2 is not mentioned in the description, nor are these documents identified therein.
4. The vague and imprecise statement in the description on page 11, lines 6-11 implies that the subject-matter for which protection is sought may be different to that defined by the claims, thereby resulting in lack of clarity (Article 6 PCT) when used to interpret them (see also the PCT Guidelines, PCT/GL/3 III, 4.3a).

**VIII. Certain observations**

1. To satisfy the requirements of Article 6 PCT and clearly differentiate the rating information **locally** input by the user from the rating information given to a program at the transmitter side (see "PG-13" in block 120 of Fig. 1), the additional feature of claim 13 should be introduced in the subject matter of claim 1 (see claims 6 and 9 in comparison).
2. The steps of claim 6 are also obscure since:
  - "obtaining a rating locally" could be interpreted by having a **remotely** input rating (such as "PG-13") **locally** displayed and thus, not be restricted to locally inputting rating information, which appears to be an essential feature of the present alleged invention;
  - "associating said rating with said selected program" does not specify that this association is to be used to select a program in response to it, which constitutes another essential feature.
3. Finally, the additional feature of claim 8 is not quite understandable.

1. This international preliminary examination report has been prepared by this International Preliminary Examining Authority and is transmitted to the applicant according to Article 36.

2. This REPORT consists of a total of 6 sheets, including this cover sheet.

☐ This report is also accompanied by ANNEXES, i.e. sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions under the PCT).

These annexes consist of a total of sheets.

3. This report contains indications relating to the following items:

- I ☒ Basis of the report
- II ☐ Priority
- III ☐ Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- IV ☐ Lack of unity of invention
- V ☒ Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- VI ☐ Certain documents cited
- VII ☒ Certain defects in the international application
- VIII ☒ Certain observations on the international application
